# INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/AU2004/000427

**Box No. V** Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

## 1. Statement

Novelty (N)	Claims	YES
	Claims 1-39	NO
Inventive step (IS)	Claims	YES
	Claims 1-39	NO
Industrial applicability (IA)	Claims 1-39	YES
	Claims	NO

## 2. Citations and explanations (Rule 70.7)

This report has considered the following documents cited in the International Search Report:

D1 WO 2002/051415

D2 US 6001852

### NOVELTY (N): Claims 1-39

D1 discloses the use of clioquinol and phanquinone in treating or preventing prion disorders eg Creutzfeld-Jacob disease and spongiform encephalopathies. It further discloses a list of 8-substituted quinolines (See page 18 line 21 to page 20 line 11) suitable for use in the treatment.

D2 discloses a method for treating or preventing Alzheimer's Disease (AD), a neurological disease resulting from oxidative stress, with clioquinol and optional with vitamin B12. It is also disclosed that the method of the invention prevents or alleviates the signs and symptoms of AD eg cognitive impairment and memory loss (See col. 6 lines 43-48, col. 7 lines 18-31 and claims 1, 3 and 4).

Claims 1, 2 and 16-22 defining the use of any 8-substituted quinolone or an agent which reduces the levels of reactive oxygen species (as in claim 21) in the treatment of a neurological condition or disorder, are anticipated by the disclosures of clioquinol in D1 and D2.

Claims 3-15 and 23-39 are also not novel in the light of the disclosure of D1 which teaches several suitable 8-substituted quinolines which fall within the scope of the compounds envisaged by the claims.

Therefore claims 1-39 lack novelty.

### INVENTIVE STEP (IS): Claims 1-39

As above.

### INDUSTRIAL APPLICABILITY (IA): Claims 1-39

Claims 1-39 have industrial applicability.

**Box No. VIII**    **Certain observations on the international application**

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claims 1 and 20 are not clear with regard to the terms “ derivative”, “homolog”, “analog”, “chemical equivalent” and “mimetic”. It is not clear what compounds are being envisaged by these broad terms.

Claim 5 is not clear as it is appended to itself.
